

## Subzero Sewer Systems

### Full Enclosure

Fully enclosed to protect tanks from cold weather elements.

### Heating and Insulation

Further mitigate risk from subzero temperatures.

### Integrated Heated Bathroom

Toilet and sink in heated room to increase worker comfort, increasing work site productivity.

### Best in Class Capacity

4,000 gallon capacity in an 8' x 20' footprint.

### Link Multiple Accommodations

Link multiple workforce accommodations with varying rates of output to a single system, which reduces need for frequent pump out.

### Mobilization Friendly

Loadable by winch truck and fork lift, can be loaded end-to-end to reduce number of trips.

### SUBZERO SEWAGE SYSTEM

Frozen sewage can bring a rig site to a grinding halt. Mitigate the effects of freezing temperatures with an HB Rentals Subzero Sewage System, designed to help optimize rig site operations and avoid delays brought about by extreme cold. The system is composed of a steel container, heating and insulating elements, two tanks, and pipework.

### Fully Enclosed for Protection

- HB Subzero Sewage Systems are fully enclosed to protect the tanks from cold weather elements.
- Tanks are fully encapsulated in a durable and site friendly container - no need to be hidden from the crew or visitors to your site.
- Fully enclosed systems allow for cleaner and better organized site plans, decreasing safety risk that arises from cluttered rig sites.

### Insulation and Heating for Enhanced Sub Zero Capabilities

- In addition to being fully enclosed, HB Rentals' tanks are also heated and insulated to further mitigate risk from subzero temperatures.

### Industry Leading Capacity

- 4,000 gallon holding capacity puts HB Rentals' tanks at the top of their size class.
- Increased storage capacity equates to less pump outs resulting in cost savings.
- Increased storage capacity allows for fewer separate tanks per rig site.

### Optimize Pump Out Services

- Link multiple accommodation units with different rates of output to a single tank via lift stations, creating an equalized distribution system.

### Optimize Pump Out Services (cont.)

- Equalized distribution results in fewer pump outs, and thereby lower costs, by pumping out from a single shared tank.

### Integrated Heated Bathroom for Worker Comfort

- Subzero Sewage Systems come with an integrated heated bathroom – toilet and sink. Increase work site productivity by increasing worker comfort in freezing conditions.

### Dual Pump Design for Redundancy

- Two pump design means that pump failure will not stop operations. Simply switch over to the 2nd pump to continue rig site operations.

### Indicators and Alarms to Prevent Problems

- An integrated sewage overflow alarm warns you when your sewage fill rate reaches 75% capacity – to prevent overflow risk and environmental violations.

### Plug In Optimized

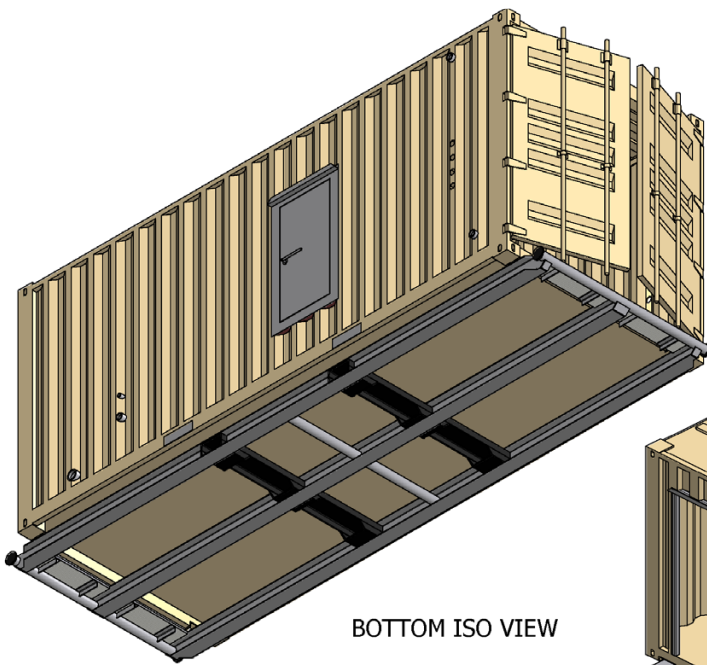

- HB Rentals tanks are equipped with external power connections, allowing for easier and faster deployment.

### Mobilization Friendly

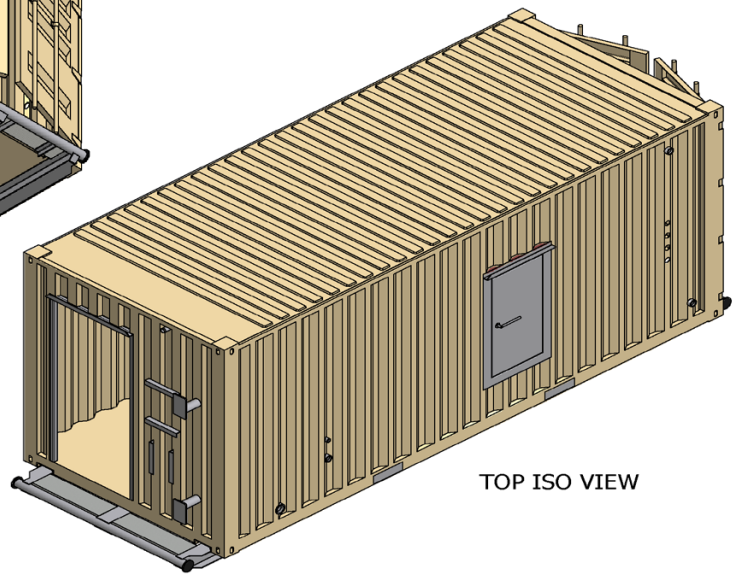

- The HB Subzero Sewage System can be loaded by winch truck or forklift.
- Container design allows for the system to be loaded from end-to-end to reduce number of trips, decreasing mobilization costs.
